

Easy Training for SAT Preparation

Kenji Matsuki

Duration: Starting from Sunday, September 10

Time: 1:30 pm - 3:00 pm (1 hour and 30 minutes)

Place: Carmel High School (Room yet to be decided and announced)

Goal: To provide an easy yet firm training for the student to be better-prepared for the NEW SAT

What to expect: SAT is something every high-school student has to face in order to get into the university of his/her choice. The problems in the Math section of SAT are not particularly deep or super difficult. However, SAT tries to test the basic mathematical skills of the student in a time-pressed environment. They also changed its format last year.

There are tons of books about SAT, and IDEALLY a student should be able to prepare himself/herself by picking up one of the books and by having the iron will to study. But PRACTICALLY, there are some obvious questions. Which book to choose ? Who has the iron will ?

I chose the two books, which I think are best-suited for the students. Each week the student works on the print-outs, sorted out by the types of mathematical skills they need, in the format of

- first do a timed try-out,
- then review the material and discuss the difficult problems,
- lastly do a timed practice again.

Having fun working on the problems every week just for an hour and half with friends, the student will acquire the necessary skills and techniques to score high in SAT !
